

Khata App

Product Overview

Khata Mobile App is a custom mobile solution built for Al Mustafa Garment to manage customers and suppliers. The app streamlines business record-keeping, enables easy access to customer/supplier data, and integrates with WhatsApp for instant report sharing. The complete UI/UX was designed in Figma, the frontend developed in React Native, and the backend implemented in Node.js with MongoDB.

Duration

2 Months

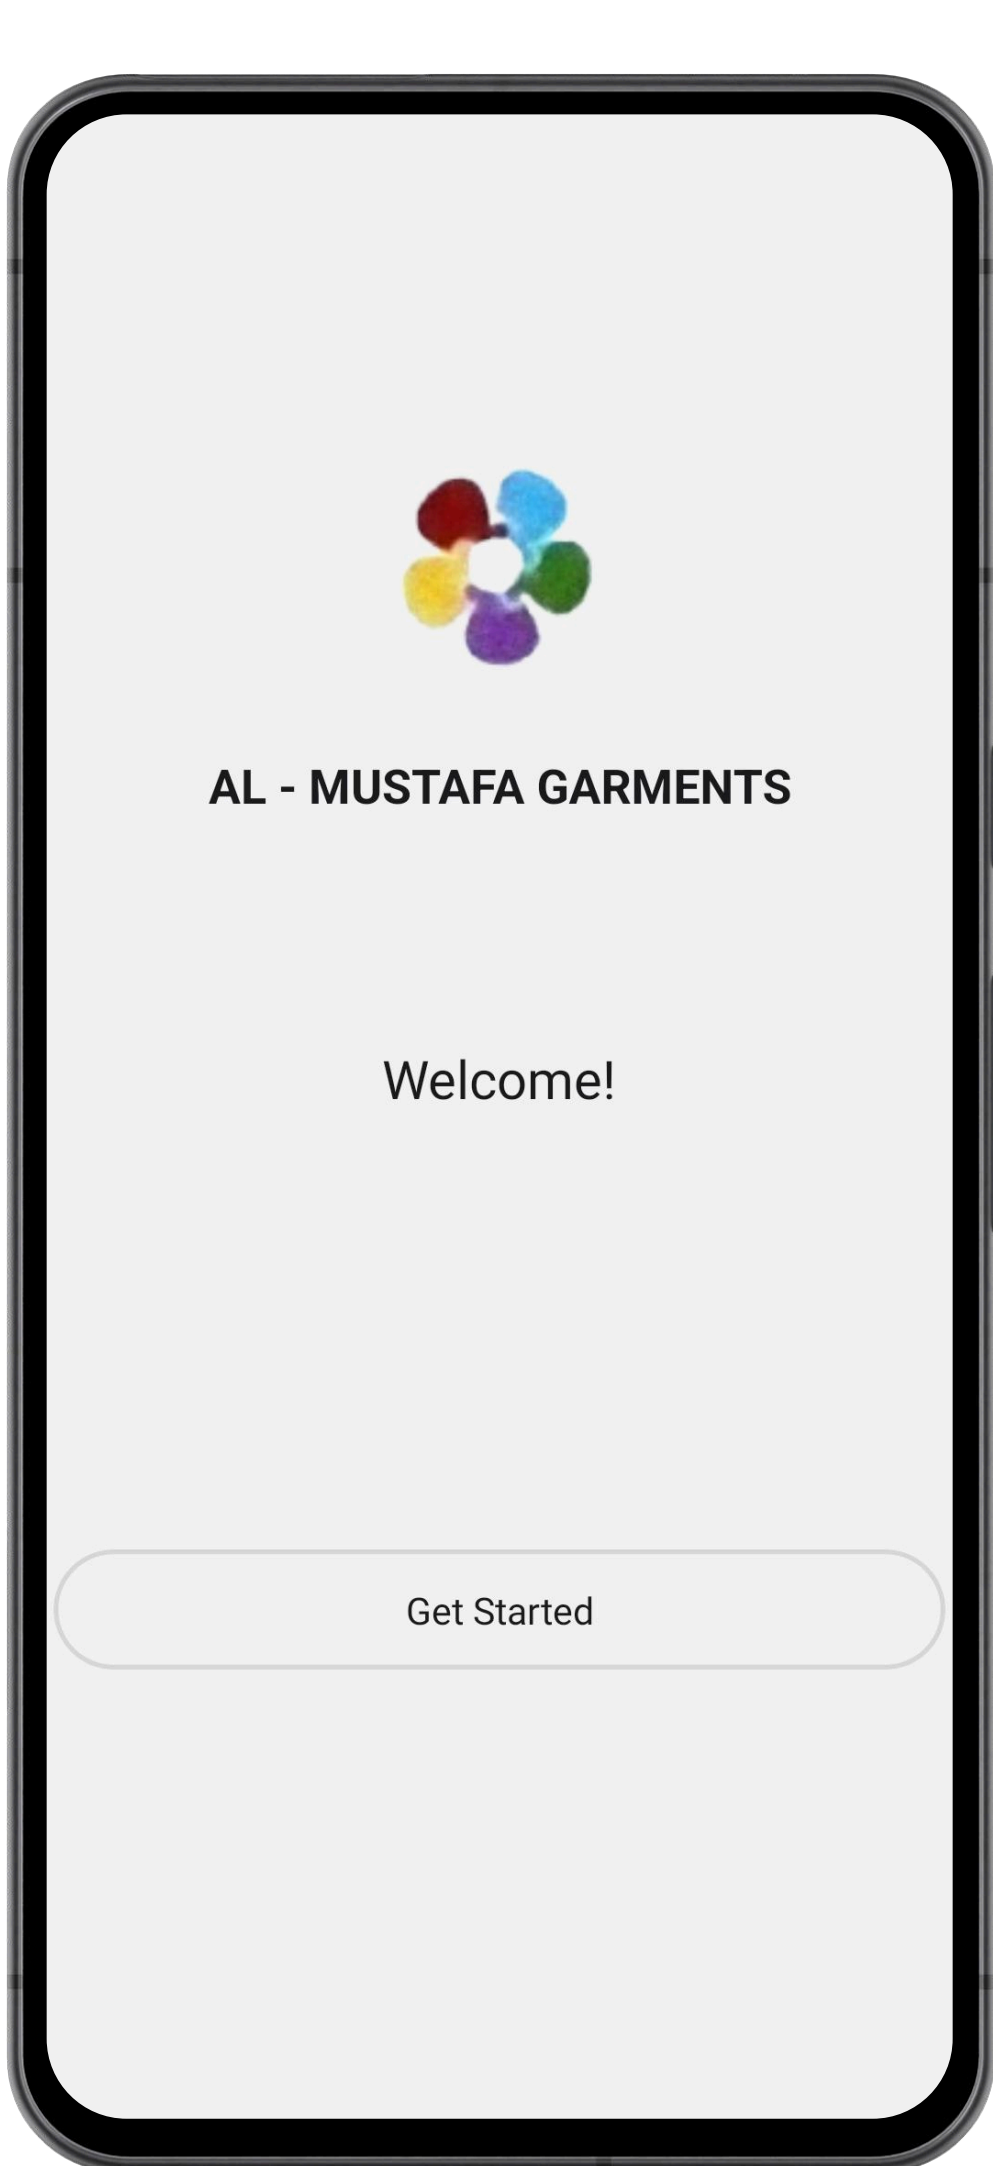

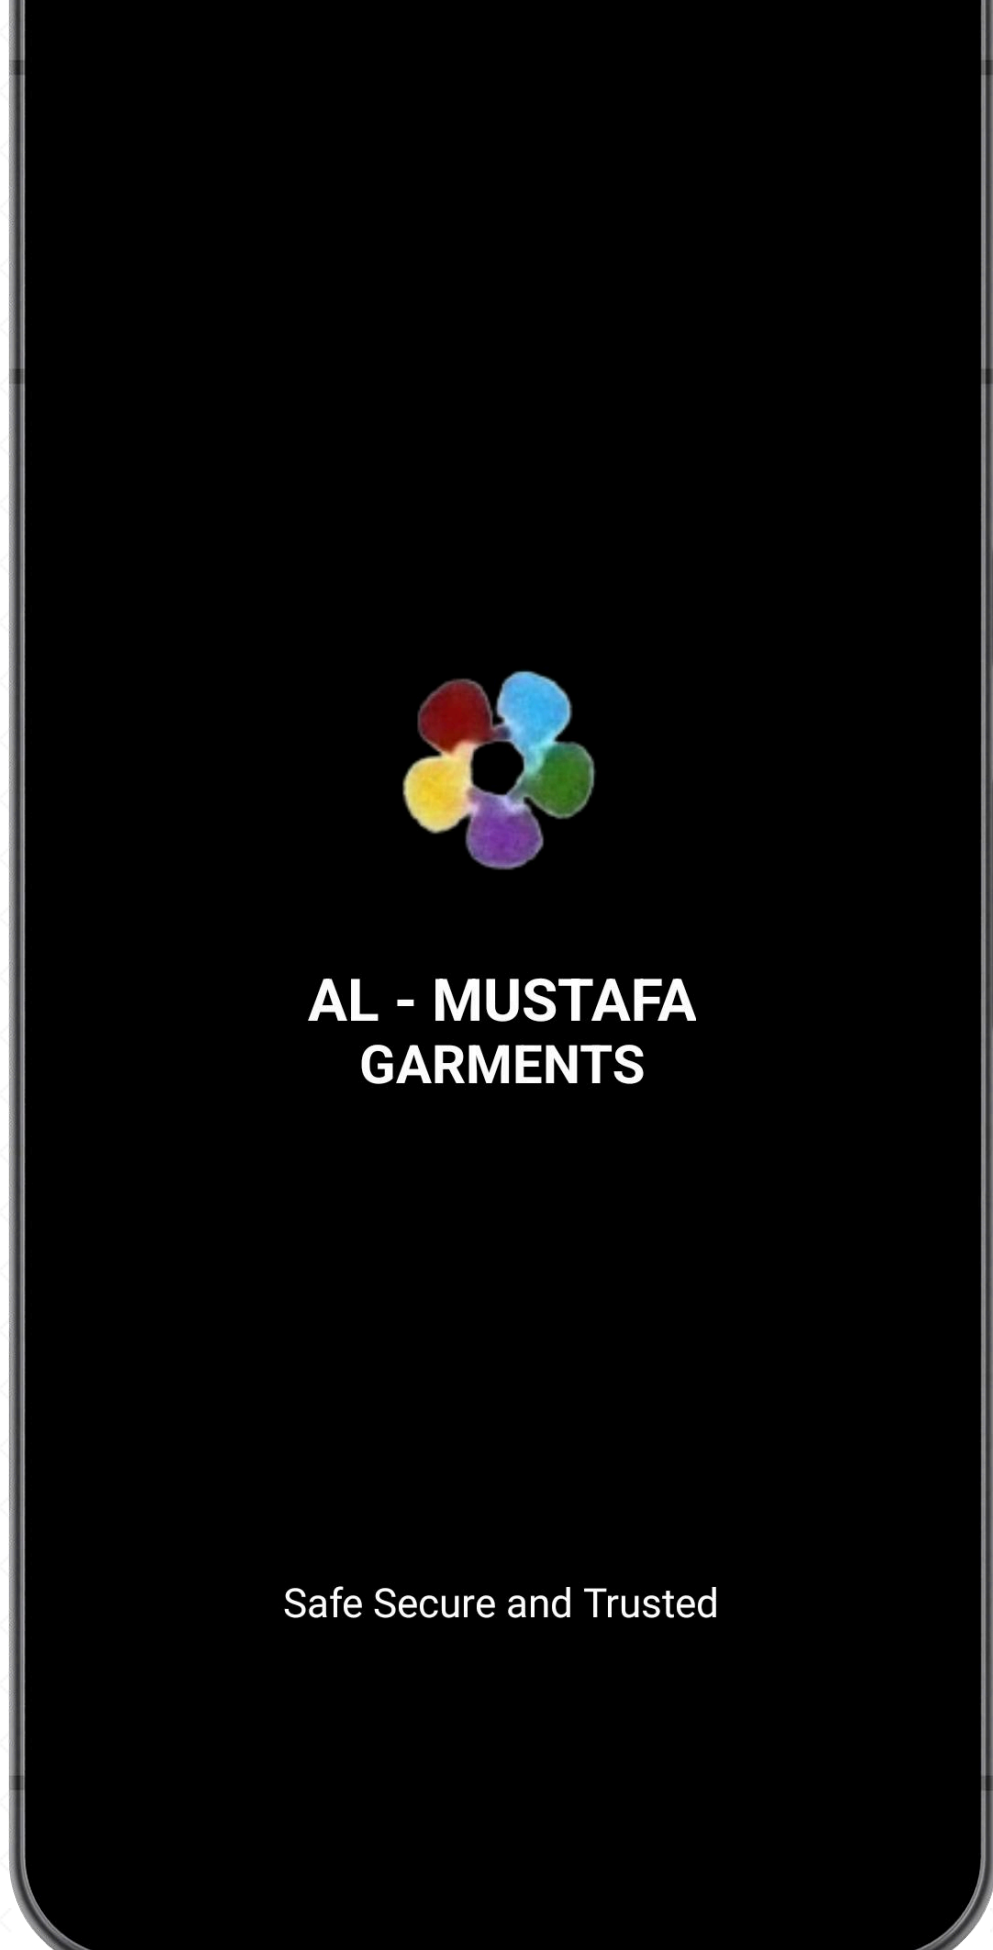

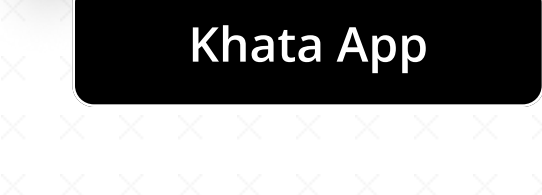

Role

Full Stack Developer

Technologies used

JavaScript, TypeScript, Figma, React Native, Node.js, Express.js

MongoDB

Problem Statement

1. Small businesses like Al Mustafa Garment often rely on manual registers or basic spreadsheets to track customer and supplier transactions. This causes:

- Disorganized records
- Time-consuming report preparation
- Difficulty sharing updates with stakeholders
- Increased risk of errors in calculations and data entry

Possible solution

1. A mobile application that digitizes customer and supplier records, automates report generation, and integrates with WhatsApp for quick communication.

Key features:

- Add, edit, and search customer/supplier profiles
- Maintain transaction history with payment tracking
- Automatically generate detailed reports
- Share reports via WhatsApp in one click
- Secure data storage with MongoDB backend

Visual Design
